PROFESSIONAL SUMMARY

Customer Support Specialist with a technical profile and 5+ years of experience in SaaS, e-commerce and payments. I solve Tier 1 and Tier 2 cases: API and payment gateway troubleshooting, plus bug escalation and follow-up with Engineering in GitHub. At Tiendanube I handled ~60 daily tickets in Zendesk with a **2-minute first response time**, **100% SLA compliance** and a **96% CSAT**. I turn recurring inquiries into tools of my own: with Cuota Nube I reduced cost-related inquiries by **more than 25%**. Trained in Frontend Web Development (JavaScript, React, SQL) and applied AI.

WORK EXPERIENCE

Tiendanube – Customer Support Specialist (Support Guru) | SaaS / E-commerce | May 2025 – Nov 2025

- Troubleshot integrations and APIs with **Insomnia** across payment gateways (Pago Nube, Mercado Pago, MODO, Ualá Bis); handled chargebacks, verified their resolution in dLocal and built reports.
- Escalated and followed up on **bugs with Engineering in GitHub**, providing workarounds so customers could keep operating; received recognition.
- Designed **Cuota Nube**, a fee and installment calculator (calculadora-tiendanube.vercel.app), which reduced cost-related inquiries by **more than 25%** and served as the basis for the official calculator, recognized by the Product team.
- Handled ~60 daily multichannel tickets in Zendesk with a 2-minute FRT, **100% SLA compliance** and **96% CSAT**, solving Tier 1 and Tier 2 technical cases; also supported Customer Success with tickets that had to be answered within 3 minutes to avoid breaching the SLA. Metrics backed by my evidence dossier: florbagnis.github.io/Portfolio-FlorBagnis/Dossier-en.pdf
- Created Zendesk macros for the Pago Nube team (50+ people), used Tableau to monitor my metrics and check customers' plans, built an Excel tool to calculate the target CSAT, customized templates with HTML and CSS without depending on Engineering and led payment reconciliation with Finance.
- Retained **more than 150 stores per month** at risk of churn due to KYC issues, using my own tools (Cuota Nube and macros in Text Blaze), and turned negative tickets into positive ones; onboarded **more than 80 entrepreneurs per month** with Loom videos, screenshots and personalized follow-up so they could complete KYC without errors.

Europ Assistance – Remote Customer Support & Operations Assistant | Sep 2023 – Dec 2024

- Handled claims and inquiries for La Caja Seguros, with 80%+ compliance on metrics and SLA, under daily quality audits. Coordinated tow trucks, glass and dent repair with providers, following up until each case was resolved.
- Managed incidents in Salesforce and Neotel, with reports and automations in advanced Excel.

La Nona – Freelance, weekends: Chat Support & Design | Aug 2022 – Mar 2025

- Customer service and orders via WhatsApp, Instagram and Facebook; designed promo flyers and daily menus.

Cat Technologies – Support & Retention Agent | Telecommunications (Personal) | Jun 2020 – Jul 2022

- Personal campaign: customer service and retention, with 70+ daily multichannel inquiries; met the call time target (max. 5 min) **95% of the time**, with 80% compliance on metrics and FCR. Trained 5 new hires as a buddy; received a recognition award. Retained more than 30 customers per month with loyalty offers.
- Santander campaign (banking, Jan – Jul 2022): closed 60 sales per month of accounts, loans, auto loans and cards.

PROJECTS

• **Neko Jobs** (JavaScript, Cloudflare Workers, Firebase) | Repository: github.com/FlorBagnis/Neko-Jobs – Shared Telegram bot that alerts you to new openings at tech companies in Argentina and LATAM based on your keywords.

• **Cuota Nube** (Fee and installment calculator) | calculadora-tiendanube.vercel.app – Basis for Tiendanube's official calculator.

• **Mensuales** (HTML, CSS, JavaScript, Firebase) | gastosmensuales-two.vercel.app – Free app used by 20+ people: expense tracking, alerts, PDF/CSV, CSV import and Firebase.

• **CX-Macros** (React, Vite) | cx-macros.vercel.app – Support tool with 12 templates, custom editing, favorites, PDF/CSV export and “Polish text”.

• **CSAT Calculator** (HTML, CSS, JavaScript) | florbagnis.github.io/calculadora-csat – Evolved from an Excel tool I shared with Tiendanube teammates into an app to share with CX peers.
