Cuota Nube Calculator: calculadora-tiendanube.vercel.app

Customer Support Specialist with 5+ years of experience in SaaS, e-commerce, and payments. Hybrid profile combining customer service with technical troubleshooting (APIs, payment gateways, GitHub, Zendesk). This document brings together real screenshots of my work in quality, volume, initiative, and cross-functional collaboration. Native Spanish · Technical English (studying B2) · Basic Portuguese.

Key results

96%

Q3 2025 CSAT

Customer satisfaction in my Individual Development Panel.

304

tickets resolved in one week

With 46 “Good” ratings and 0 “Bad” ratings in the ticket statistics panel.

150+

at-risk stores retained per month*

Retention of stores at risk of churn due to KYC, using Cuota Nube and macros in Text Blaze.

>25%

fewer cost-related inquiries*

With Cuota Nube, the rates and installments calculator I built; basis for the official calculator*.

3 months

of onboarding completed

Completion recognized by the team in Slack.

2 min

first response · SLA 100%*

Multichannel support in Zendesk, ~60 tickets per day*.

* Data from my CV; the rest is supported by the screenshots on the following pages.

Contents

2 Quality: 96% CSAT and individual performance panel

3 Initiative: Cuota Nube, rates and installments calculator

4 Volume and quality: ticket statistics and metrics calculator

5 Completed onboarding and customer case follow-up

Data note. The data reflects my own performance. Screenshots were cropped and third-party names and data were hidden to protect their privacy.

Tiendanube welcome post on LinkedIn (Support Guru).

96% CSAT in Q3 2025

Q3 2025 Individual Development Panel (IDP) at Tiendanube, with monthly tracking and a quarterly summary. Below, the scoring rules from the same panel.

← [2025] [PDI] | Panel de Desarrollo Individual | Florencia Bagnis

TDs	%	Set	Q3	CSAT Q3 total	Jul	Ago	CC's	OI's	Mediana	Dispersión	Set	Q3	Total
4	96,00%	42	41	96%	52	50	189	642	112	58,73%	1	38	92

Individual Development Panel · "Metrics" sheet.

WHAT IT DEMONSTRATES

- **Quality:** 96% quarterly CSAT, measured through customer ratings.
- **Data analysis:** Panel with monthly tracking (Jul, Aug, Sep), median, dispersion, and total score (92): working with objective indicators and explicit evaluation rules.
- **Goal orientation:** I understand the thresholds used to measure my performance (e.g., productivity >=120% and metric 80+ as top bands).

Reglas		
Produtividad		Métrica
Dispersión	Puntos	Puntos
>=120%	40	80+
>=87% e <100%	30	55+
<87%	0	<55

Panel scoring rules (Productivity and Metric). Screenshot in Spanish: Reglas = Rules, Puntos = Points.

Cuota Nube: rates and installments calculator

[redacted] 10:11

Buenas!! Cómo andan?
Excelente Flor, muchas gracias por el laburo!

Siii me parece muy bueno! Creo que es una muy buena manera para resolver momentáneamente el problem. Tengo algunas dudas que me surgen como por ejemplo:

- Seguimos llamando "cuota simple" y el plan ya no existe. Pienso que deberíamos tener un nombre propio. Pero si hacemos eso.... ¿Cómo le explicamos a los merchant que no van a tener la financiación "barata"?
- Hay merchant con diferentes precios. Este escenario abarca los de "custom plan" y "cuota nube". Es decir, probablemente al team comercial no le termine de servir 100%

Pero estos son dos puntos que van más allá de esta calculadora en especial! Lo traía solo a modo comment. Avancemos y me llevo esa discusión para intentar resolverla

Después, lo que probé está perfect! Me gusta

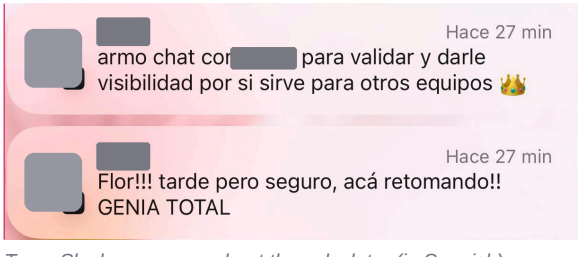

Muy bueno el problem! Nos va a ayudar a entender qué uso tiene al calculadora. Yo ahora voy a escribir en un room avisando que Flor armó esa calculadora para support y que van a empezar a usarlo. Que lo ideal, es que se unifique a la calculadora de Tiendanube

Slack message with feedback on the calculator (in Spanish).

Cuota Nube is a rates and installments calculator that I designed for Support (calculadora-tiendanube.vercel.app). I validated it with another team, which reviewed it, provided feedback, and proposed it for team use. According to my CV, it served as the basis for the official calculator, with recognition from Product.

WHAT IT DEMONSTRATES

- **Initiative:** I identified a team need and built the solution independently.
- **Cross-functional collaboration:** I validated it with another team, and their feedback opened a process discussion (plan naming and custom pricing cases).
- **Scalability:** the stated goal is to unify it with Tiendanube's calculator and give other teams visibility.
- **Impact:** more than 25% fewer cost-related inquiries (according to my CV).

Team Slack messages about the calculator (in Spanish).

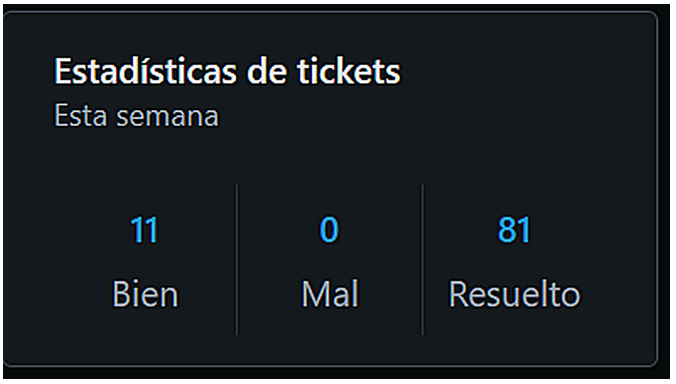

Ticket statistics and metrics calculator

For customer satisfaction (CSAT) analysis and tracking, the Zendesk data view is configured with weekly aggregation by team leads, the same for all agents (it is not a personal configuration), allowing the service's progress and consistency to be measured periodically.

Zendesk "Ticket Statistics" panel: "Good" and "Bad" ratings and resolved tickets, in two different snapshots (a full week and a single day).

Screenshot 1 (week): 46 Good · 0 Bad · 304 Resolved. Interface in Spanish: Bien = Good, Mal = Bad, Resuelto = Resolved.

Screenshot 2 (single day): 11 Good · 0 Bad · 81 Resolved. Since the view is weekly ("This week"), this screenshot, taken on a Monday at 10:00 PM before the workday ended, only included that day.

WHAT IT DEMONSTRATES

- **Volume:** 304 tickets resolved in one week (around 60 per day, consistent with my CV) and 81 resolved in a single day.
- **Quality:** 0 "Bad" ratings in both screenshots, with 46 and 11 "Good" ratings.
- **Consistency:** no negative ratings with either 304 tickets in one week or 81 in one day.

Excel metrics calculator

An Excel tool I built to track my CSAT: using negative and positive ratings, it calculates the current percentage and how many positive ratings are needed to reach the 94% target.

	Negativas	Positivas	Total	% actual	Positivas necesarias	Cantidad extra de positivas que te faltan sumar para alcanzar el 94%
2	1	25	26	96,15%	16	0

Metrics calculator (Excel): 1 negative and 25 positive ratings = 96.15%; 0 positive ratings needed to reach 94%.

WHAT IT DEMONSTRATES

- **Initiative:** I built a tool to track my CSAT goal.
- **Data analysis:** formulas that turn ratings into an actionable target (positive ratings needed).
- **Goal orientation:** I work toward a 94% target and know how much is missing at any given time.
- **Collaboration:** I shared the calculator with my teammates so they could understand the metrics.

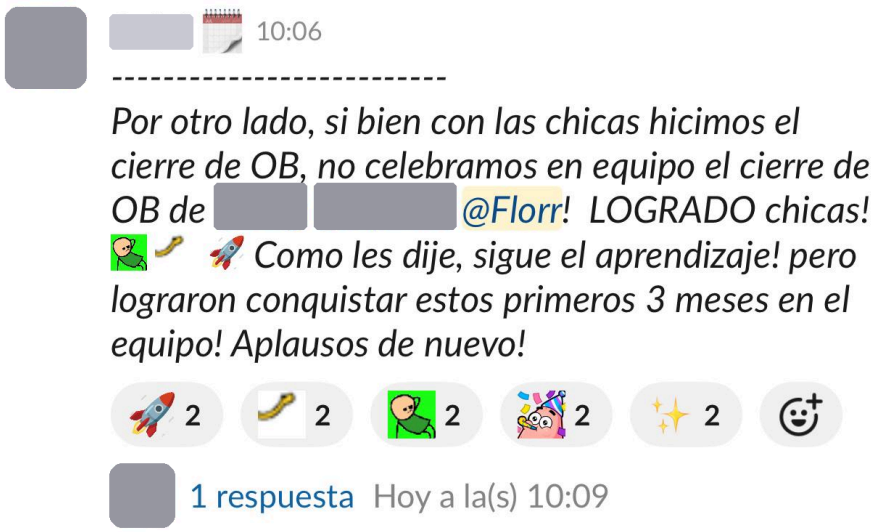

Reference file. Original format: Excel spreadsheet (.xlsx), "Calculator 94%" sheet, with editable formulas (sum, percentage, ROUNDUP, and IF). It calculates the current % and the positive ratings needed to reach 94%. The Excel file is not attached to this PDF: it can be viewed and used through the web version of the calculator (below).

Web version of the calculator (built from my Excel for better visualization): open online calculator

Completed onboarding and case follow-up

Onboarding completion (3 months)

Team Slack message upon completing onboarding: recognizes that we completed our first 3 months on the team.

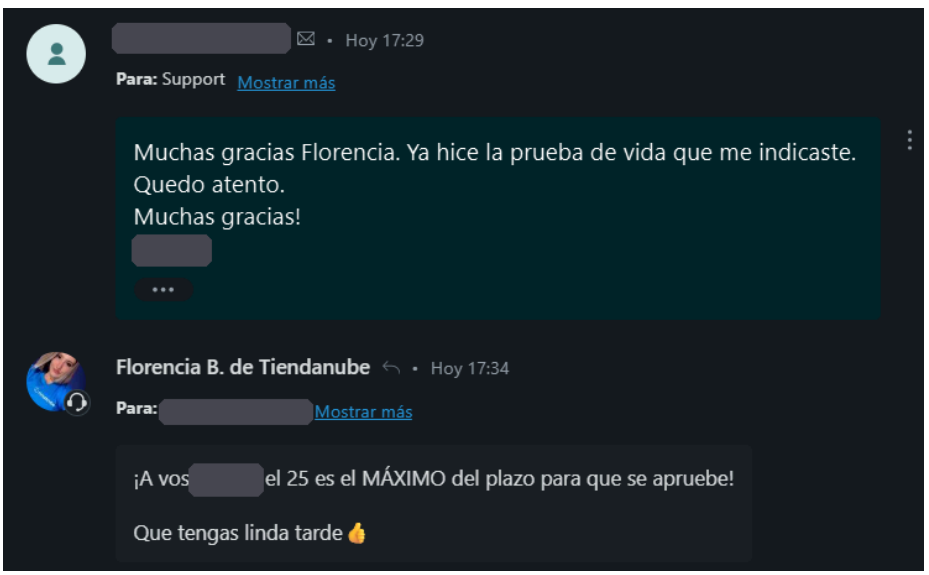

WHAT IT DEMONSTRATES

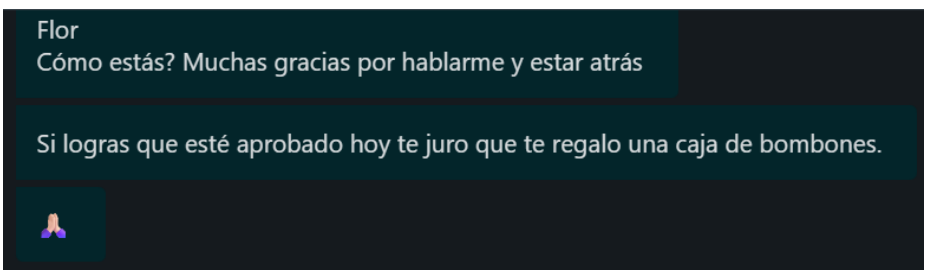

- **Adaptation:** onboarding completed in 3 months, with team recognition.
- **Teamwork:** onboarding completion celebrated by the team.

Customer case follow-up

Two examples of customer communication: guidance through a verification step (liveness check) with notice of the approval timeframe, and a thank-you message for support throughout a process.

Email (in Spanish): the customer confirms the indicated step and I inform them of the maximum timeframe.

Thank-you message for the support provided (in Spanish).

WHAT IT DEMONSTRATES

- **Clear communication:** I provide specific steps and communicate timeframes directly.
- **Follow-up:** I keep the customer informed about the process steps and timeframes.
- **Customer relationship:** I receive thank-you messages for the support provided.
- **Retention (according to my CV):** I retained more than 150 stores per month at risk of churn due to KYC, with Cuota Nube and macros in Text Blaze, and supported more than 80 entrepreneurs per month through their onboarding.
